

DOS REVIEWED 09-Mar-2011: NO OBJECTION TO DECLASSIFICATION

THE WHITE HOUSE

REFER TO DOS

WASHINGTON

SECRET/SENSITIVE

April 1, 1974

Henry --

These are informal Defense recommendations on the Egyptian request list.

Defense proposes providing only the first four items (about \$10 million). Their reasons for denying the other items are threefold:

- (1) Susceptibility to technical compromise (i.e., mistrust of Egyptians).
- (2) Similar equipment has not been provided the Israelis.
- (3) Equipment still in R&D status.

In addition, there were a couple of items not identifiable from the description.

Price of the total identifiable request list is only about \$260 million.

There is also the question of the legal aspects of third country transfer. Saunders has a separate paper for you on that issue.

(I have checked a couple of additional items which it appears could easily be provided, even within Defense's restrictive parameters.)

PRICE

QUANTITY

ITEM

REMARKS/RECOMMENDATION

\$ 250,000

7 100

✓ Laser Range Finders
for Artillery OPS
(Ser 12)

Remarks: Item currently under development. No substitute available.
Could be supplied from procurement beginning FY78.
Recommendation: Day request.

\$ 9,400,000

1

✓ Aircraft equipped as airborne
operations and control units
(Ser 17)

Remarks: Could provide from new production a C-130 with an Airborne
Battlefield Command and Control Center capsule, w/PLT 13-05,
providing from USAF assets considered unacceptable impact. System
is interim until AEWIS (B-36) is available in FY77. Israeli
request for similar capability has been denied.
Recommendation: Day request.

--

5

✓ Unit Direction Finder,
Mobile (200-500 MCS)
(Ser 18)

Remarks: Per Army, no such capability currently exists. OCHD
states that R&D in out years is planned, AF has A/CUD-6, with
25-400 MCS coverage, but system is fixed installation. No
price and availability data available.
Recommendation: Day request.

TOTAL

\$217,875,870

ITEM	QUANTITY	EXTENDED PRICE
Field Surveillance ✓	5	\$ 2,500,000
Aerial Cameras (Ser 9)	3	\$ 5,000,000
Panasonic Broad Band Receiver (30-500 MCS)	5	--
Aircraft equipped for radar jamming (EB-6) (Ser 11)	3	\$68,300,000
Electronic Recce Aircraft (Ser 12) ✓	2	\$11,600,000

REMARKS/INFO OPERATION

Remarks: Army has no radar with range requested. Could provide AN/TPS-58A from procurement beginning FY78. Radar has range of 10 mi for personnel and 20 miles for vehicles. Radar is produced under co-production agreement which requires approval of Fiat and France for sale to third country. Sale to Israel has been denied on this basis.

Recommendation: Deny request.

Remarks: Could provide from production at rate of 1 a month beginning 7 mos after signing of letter of Offer. However, Israeli requests for high resolution photographer recce capability has been denied up to this time.

Recommendation: Deny request.

Remarks: Check with Army, NSA & ASA indicates that no equipment fitting description is available.

Recommendation: Deny request.

Remarks: Could be supplied from new procurement s/PRT of 1800s Aircraft and associated ECM equipment considered extremely sensitive and subject to technical intelligence and production exploitation. ECM is developed, would place CMs in severe jeopardy. Similar request from Israelis has been denied.

Recommendation: Deny request.

Remarks: System requested not addressed due to special sensitivities. An alternate system designed for use in the 1974 could be made available from production in 31 months, but adaptability to MIG aircraft is unknown. Alternate system also sensitive due to potential for technical intelligence and production exploitation. Israeli request for similar capability has been denied.

Recommendation: Deny request.

ITEM	QUANTITY	ESTIMATED PRICE	<u>REMARKS/AVAILABILITY</u>
MWERICK (Ser 14)	100 +	\$ 2,400,000	Remarks: Item immediately available from stock w/no impact on MRF capability. Would require extensive modification of aircraft (MIG-21) cost of which cannot be estimated. Also no information available as to ability to provide equipment required for aircraft modification. Munition and guidance system considered sensitive. <u>Recommendation:</u> Do not provide due to potential technical intelligence and production exploitation.
KALLEYE (Ser 15)	200 +	\$ 320,000	Remarks: Same as for MWERICK. <u>Recommendation:</u> Same as for MWERICK
Cobra-104 Helicopters	24	\$31,500,000	Remarks: Could be provided from procurement w/ILT of 36 mos. Aircraft scheduled for procurement does not have all weather or night passive vision equipment; AMI is first helicopter to be so equipped and will not be available until the 1980s. It should be noted that Israeli request for Cobra has been refused. <u>Recommendation:</u> Deny request.
TO# Launcher (Ser 3)	100 +	\$ 2,600,000	Remarks: Can be provided from new procurement w/ILT of 18 mos. Diversion from Army stocks or scheduled procurement considered unacceptable impact. System considered sensitive due to potential technical intelligence and production exploitation. <u>Recommendation:</u> Deny request.
Firebee Drones (Ser 5)	48 +	65,000,000	Remarks: Request is for three types: low altitude target, high altitude target and recon, all to be ground launched. Target drones, AMI and spares could be provided w/no impact. However, no control system is available (the fear in MRF inventory are permanent installations, not suitable for movement) and information is available as to lead time required to procure. There are no ground launched recon drones in MRF inventory. Could be provided at rate of 3 months beginning 18 mos after signing letter of offer. Control station problem still pertains. <u>Recommendation:</u> Deny request.

PRICE

QUANTITY

ITEM

Remarks: Item not closely meeting description is AN/APR-124 HURSID
TTL, 22 inch requires 1 AN/APR-124 HURSID TTL for sensor read-out.
Items could be provided from production w/o significant impact with
12 month production leadtime. Could probably be provided from
U.S. stocks (AN/APR-124), but impact on US forces is unknown.
Recommendation: Agree to provide; take from US stocks.

Remarks: AN/APR-39 (Helo) could be produced from production with
TTL of 6 months. AN/APR-10 (HURSID) (HURSID) is development item w/firs
production scheduled for FY77. Not considered favorable.
Recommendation: Agree to provide AN/APR-39 from production

Remarks: Can provide from production w/deliveries Aug-Oct 75.
Could from inventory stock, but would represent 18% drawdown; considered
unacceptable impact. Also requires aircraft change kit, none of
which are on procurement - HLF unavailable. Do not know that aircraft
change kit (which requires 439 manhours for installation) could be
installed on foreign-produced Sea King helicopter.
Recommendation: Agree to provide from procurement contingent upon
determination of compatibility of aircraft change kit w/Sea King
helicopter.

Remarks: Item immediately available from stock w/no impact on RCAF
capability. BIA states item could be mounted on MIG-21
w/only minor modification to aircraft required.
Recommendation: Agree to provide.

Remarks: Item immediately available from stock w/no impact on RCAF
capability. BIA states item could be mounted on MIG-21 w/only minor
modification to aircraft required. In the past, this armor
piercing munition has been considered very sensitive.
Recommendation: Do not provide due to potential technical intelligence
and production exploitation.
